Bin Activators BA

11

Description ▼

The BA Bin Activator is a device of conical shape that, due to vibration, facilitates material flow from hoppers or silos. It consists of a seamless carbon steel cone manufactured on a sheet metal lathe, a seamless SINT® engineering polymer seal with integrated upper and lower flange, suspensions for connection of the Bin Activator with the silo, as well as one or two electric vibrators.

Function ▼

One or two electric vibrators fitted to the unit generate vibration of the Bin Activator every time the feeding device beneath the silo is started for material discharge. During operation the Bin Activator describes a gyratory movement which is transmitted to the material inside the silo. The result is smooth material flow through the Bin Activator outlet into the connected feeder. The use of this equipment ensures optimum feeding of the material causing "mass flow" inside the silo, thus avoiding bridging or rat holing phenomena.

Application ▼

Discharging of a variety of powders

Usually fitted in large numbers under material storage silos or daily buffer silos/hoppers to discharge poorly flowing powders such as additives.

The Bin Activator outlet is usually shut off by a slide valve or butterfly valve which is connected with a mechanical feeding device or loading bellows.

Benefits ▼

- ✓ High discharging performance;
- ✓ No waste material thanks to special seal design;
- ✓ Reduced maintenance thanks to long-life seal material.

Paint & Varnish Processing

Bin Activators BA

Technical Features / Performance ▼

- ▶ Diameters up to 3,000mm
- ▶ No internal residue nests
- ▶ 304L SS available for additives
- ▶ Smooth internal finishing
- ▶ Strong seamless seal
- ▶ ATEX-compliant
